

Thefts of tractors and quad bikes have risen dramatically in 2103, with a 35% increase in thefts of tractors alone. Rural crime in general has shown an increase over the past few years as thieves switch their attention to easier targets than cars and urban homes.

...but to him,
it's free range.

At It's MINE technology the chips we use are exactly the same as the ones that are used for animals. Why reinvent the wheel?

Existing schemes to protect farm machinery are expensive. For example one well-known scheme charges an exorbitant £550 for fitting a tracker and charges a monthly fee on top.

The chips that are used in another well-known scheme have to be read by scanners that few police forces in the country use. If you want to buy a scanner to read these chips yourself it will cost you around £360. All this at a time when British farmers are struggling to make ends meet.

The technology is proven and scanners are as cheap as £40.00 or less and widely available. We also do not adopt a one size fits all strategy to providing tracking technology. The tracker you need for your car is not the same as the one you need for a quad bike or a ride on mower.

Our trackers include small, waterproof devices that will cost you £49.99 for everything from horse boxes and quad bikes.

At the other end of the spectrum we have solar powered trackers that have an effective battery life of 'forever' costing £199.99 for containers, caravans or larger vehicles.

All the trackers are easily fitted by anyone with a basic knowledge of electrics and are easily configurable.

You also get an online mapping system which means that you can use either your pc or a smart phone with a web browser to see exactly where everything is.

We have developed a new approach based on the use of technology and a better understanding of how a thief decides whether or not to steal something. It's MINE Technology is designed to interfere with that process as well as increase the chances of arrest, conviction and recovery of your property.

The first line of defence is our branding. It sends a simple message to potential thieves, 'Hands Off, It's MINE'.

It shows that the owner has taken steps to secure his caravan involving microchips and perhaps a tracking device.

Thieves do not like uncertainty.

It's MINE Technology – Simply Smarter Security

Protection against loss & theft for: Tractors, Trailers, Horse Boxes, Rotavators, Mowers, Mulchers, Ditching Machines, Stump Cutters & Cable Winches, Forklifts, Harvesters, Shredders, Sprayers, Grinders - and even untrainable Labradors.
